

Accelerate time to value for multi-party solutions

Business infrastructure, be it company internal or spanning multiple enterprises, needs a golden source of truth for critical data and the rules governing that data. Smart contracts running on distributed ledger technology (DLT), blockchains or databases provide the shared data models and guaranteed consistency that's required to build applications across organizations and remove slow and expensive reconciliation processes. But these systems form only the foundation of a solution stack, and connecting to or developing applications for such systems without the proper developer and integration tooling is complex end error prone, adding significant technology, budget, and time risk to projects.

A patchwork of libraries, developer tools, and integration components provide some remediation of this problem for most enterprise DLT and blockchain systems. But developers have to first pick their platform, and then piece together a solution stack mixing disparate custom, open-source and commercial components from many sources, leading to expensive and fragile solutions without any compatibility guarantees. In contrast, Daml Connect provides a purpose-made and coherent stack of developer tools and integration components for building, integrating, deploying and maintaining robust solutions with real compatibility and portability guarantees.

Daml Connect – Connect to any Daml network and support your cross-entity application throughout the entire software development lifecycle

Build composable, extensible and maintainable solutions by employing a clean architecture of microservices on top of a shared smart contract layer.

Connect to any Daml network with strong compatibility and portability guarantees for any solution built with Daml Connect.

Fully integrate your solution using a modular stack of purpose built libraries and runtime components allowing you to bridge cross-entity and internal applications with ease.

Increase your productivity with a powerful set of developer tools reducing non-differentiating code to near zero and allowing you to deliver value with minimal investment.

Get 365x24 Enterprise Support directly from Digital Asset, the creators of Daml.

Robust solutions that unlock the full value of your ledger

Build your network by flexibly connecting applications and infrastructures

Daml Connect allows you to expand innovation beyond organisational, regulatory, or legal boundaries. Using a composable and infrastructure agnostic toolset, capable of harnessing the power of distributed ledgers, Daml Connect allows businesses to participate in existing applications, to integrate cross-entity applications with their internal systems, or to offer entirely new services on an existing network. All applications built with Daml Connect work on any Daml network without re-engineering or network-wide buy-in needed. And thanks to the architectural patterns encouraged by Daml Connect, the composability of Daml smart contracts translates into composability of entire solutions.

Bridge cross-entity and internal solutions with ease

Daml Connect allows smart contracts and ledger data to serve as the golden source of truth rather than ending up as yet another silo. It completes the stack for fully integrated smart contract solutions using a holistically designed yet flexible set of components and libraries made for enterprise, spanning all the way from event sourcing to presentation in UIs. The use of high-adoption technology offers high compatibility and reduces technology risk. Modularity and layered APIs make sure developers can use as much or as little of it as the task demands, preventing the development of unmaintainable monoliths.

Increase productivity with fullstack development support

Daml Connect allows developers to deliver business value with minimal investment. A powerful set of developer tools provides tight feedback loops and rapid iterative development. Runtime components and libraries reduce boilerplate to near zero, allowing developers to concentrate what differentiates their business case. Real-time feedback and code-reuse between smart contracts, tests, and integrations reduce complexity and errors. Tooling for prototyping, presentation and deployment allows app creation in hours, leading to fast paced innovation and enabling low cost business case validation.

Digital Asset works with the world's largest companies across every industry to build solutions that synchronize complex multi-party workflows, lower operational cost, and mitigate risk.

Digital Asset

Digital Asset helps companies of all sizes and across industries get distributed applications to market faster, and stay there longer. At the core of our service offering is Daml, an open source and platform-independent smart contract language that enables developers to write an application once and deploy it anywhere. Our global team of professionals is comprised of experts and innovators from technology, engineering, enterprise domains and the industries we serve.
