Digital Asset Meets Highest Standards of Data Protection with ISO 27001:2013 Certification

Industry-leading accreditation signals Digital Asset's ongoing commitment to security, risk management, and best practices for data management across the organization

New York, NY – October 28, 2021 – [Digital Asset](#), a software and services provider that helps enterprises build economic value through interconnected networks, today announced that it has achieved [ISO 27001:2013 certification](#) for demonstrating the highest standards in information security management and protecting data assets.

ISO 27001:2013 is an information security standard published by the International Organization for Standardization (ISO), the world's largest developer of voluntary international standards, and the International Electrotechnical Commission (IEC). Digital Asset's certification was issued by [A-LIGN](#), an independent and accredited certification body based in the United States on successful completion of a formal audit process. This certification is evidence that Digital Asset has met rigorous international standards in ensuring the confidentiality, integrity, and availability of management of information security to protect the assets in design, development and maintenance and operation of Digital Asset's products and services.

"This is a great milestone for Digital Asset that signifies how seriously we take data privacy and security," said Yuval Rooz, Co-Founder and CEO, Digital Asset. "Our track record and rigorous dedication to best practices is why our customers trust us to protect and safeguard the availability, integrity and confidentiality of their data."

Edward Newman, Chief Information Security Officer, Digital Asset added, "Achieving ISO 27001:2013 is a testament to our company-wide focus on protecting data and delivering secure products and services. We believe this will build trust and help facilitate working with our customers and partners. This certification will make our work with customers and partners that much easier, as it further validates their vote of confidence in us to ensure the security of their data."

About Digital Asset

Digital Asset is a software and services provider that helps enterprises build economic value through interconnected networks. The company designs and delivers technology that reshapes legacy systems and workflows into efficient, secure, and interconnected applications. Daml, our core technology, is a platform for building multi-party applications. It extracts and simplifies business processes to make data accessible and optimizes workflows using smart contracts. Leading organizations across financial services, insurance and healthcare partner with Digital Asset to create new multi-party solutions that transform disparate silos into synchronized networks.
